31.5	Checking Registered Symbols	31-37
31.6	Setting Guide	31-40
31.7	Restrictions	31-46

## 31.1 Symbol and Symbol Sheet

#### 31.1.1 What is a Symbol?

You can collectively register each device data used inside the GP and Device/PLC, or variable information used in the logic program as "Symbol".

A symbol is a "Variable" to control all data at once such as device address and data type, etc. and 'Pro-Server EX' reads and writes each device data through the registered symbol.

Since you can set the device address directly on 'Pro-Studio EX', symbol registration is not essential. When you wish to change all device data at once, however, it is recommended to use symbols as much as possible for easier maintenance.

The data included in a symbol are: Symbol name, Device address, Data type, Number of data etc.

**NOTE** • The contents can be confirmed easily if a symbol has a concrete symbol name ("Maximum number of rotation", "Minimum number of rotation", etc.)

• You can use the system variables (HMI system variables and logic system variables) that is predefined in 'GP-Pro EX'. For details, refer to the GP-Pro EX Reference Manual.

- Variables on 'GP-Pro EX'
- Variables created with a logic program
  - Variable format

Variables registered by a user with optional names. To use these variables, import a screen project file (\*.PRX) created with 'GP-Pro EX'.

For details on importing, refer to "30.3 Getting Data from a Screen Project File (PRX)".

Address format

Variables automatically assigned to a device in the 'GP-Pro EX'. You do not need to import a screen project file (\*.PRX) of 'GP-Pro EX', because 'Pro-Server EX' prepares these variables in advance.

For restrictions of the variables created with the logic program, refer to "31.7 Restrictions".

#### System variables

Variables having the predefined functions on the 'GP-Pro EX'. You do not need to import a screen project file (\*.PRX) of 'GP-Pro EX', because 'Pro-Server EX' prepared these variables in advance.

System variables on 'GP-Pro EX' are displayed, when you select "#INTERNAL" of the GP3000 Series, WinGP or LT3000 on the screen, which prompts you to specify the device address, and click the list button of [Device Address], for setting ACTION or a trigger condition.

Device Name	True OFF the Constituent Device Address - the
#INTERNAL	Turn OFF the Specified Device Address after Processing.
Device Address	
	▼ Local:Sheet2
Data Type [16Bit(Signed]	Global:#HMI_SYSTEM     Global:#LOGIC_SYSTEM
, , , ,	T dibba: #Eodic_3131EM

For details about variables on the 'GP-Pro EX', refer to the "GP-Pro EX Reference Manual".

• To specify a device address, "#LOGIC" is selected as the Device/PLC in 'GP-Pro EX', however, "#INTERNAL" is selected in "Pro-Server EX".

NOTE

#### 31.1.2 What is a Symbol Sheet?

Symbols are controlled collectively on each Device/PLC. This control unit is called a "Symbol Sheet". You can create more than one symbol sheet, and symbol control is possible per sheet in accordance with the intended use.

• You can register 1500 symbols at maximum, in one symbol sheet. When the number of symbols exceed 1500, add a new symbol sheet to register.

"31.2.5 Adding Symbol Sheets"

# 31.2 Registering Symbols on a Symbol Sheet

#### 31.2.1 Registering Symbols

This section describes how to register symbols taking the above case as an example.

1 Click the [Symbol] icon on the status bar.

💱 Pro-Studio EX 🛛 ?.npx	
File         Edit         Tool         Programming Assist           Start         >>         Start         Node	Setting Help

					1 1 1	

This is the end of the symbol registration to the symbol sheet.

#### NOTE

• You can edit the contents of the registered symbols.

Click [Symbol], [Consecutive] or [Device Address] and edit the contents on the "Edit Symbol" screen.

@" "31.6.2 "Edit Symbol" Screen"

## 31.2.2 Registering Sequential Devices

### Registering sequential addresses individually as symbols

To perform symbol registration continuously for sequential device addresses, you can register these addresses together without specifying each address individually.

This section describes how to register the symbols of sequential addresses taking the above case as an example.

1 Register the device address "D50" with the symbol name "Temperature 1".

ng	Help > Symbol >> 🦂	Feature ⋗ [	Sa	ave > 🔖 Ti	ransfer	Monitor Status
	Node Name AGP1 Sheet Name Sheet3			Name PLC1 a global symbol shee	ət.	
	Symbol	Data Type	Consec utive	Device Address	No. of Data	Comment
	Temperature1	16Bit(Signed)		D0050	1	<u> </u>
L				 	1	
L					1	
					1	

For the detailed procedure, please refer to Step 1 to 5 in "31.2.1 Registering Symbols".

2 Then, register the device address "D51" as a symbol.

Click the [Symbol] field in the next row of "Temperature 1", and enter "Temperature 2" as a symbol name.

ing	Help > Symbol >> 🛃	Feature 🔉 📔	- Sa	ave 🔉 🔖 Ti	ransfer	Monitor Status		
L	Node Name AGP1 Device Name PLC1							
I	Sheet Name Sheet3							
I	Symbol	Data Type	Consec utive	Device Address	No. of Data	Comment		
	Temperature1	16Bit(Signed)		D0050	1	<b>▲</b>		
ľ	Temperature2				1			
					1			
					1			
н					1			
					1			

**3** Click the [Consecutive] field.

A panel to specify the continuous attribute appears.

The next device address "D0051" to the symbol "Temperature 1" is indicated on the left of this panel.

i Help	襆 Feature 🔉	📑 Sa	we 🔉 🏠 T	ransfer	Monitor Status
Node Name AGP	50 85 <sub>0</sub>	Device	Name PLC1		5 999 - J
Sheet Name Shee	13	🗖 🗖 Set i	as a global symbol	sheet.	
Symbol	Data Type	Consec utive	Device Address	No. of Data	Comment
Temperature1	16Bit(Signed)		D0050	1	
Temperature2			Consecutive Release + D0051 Cancel	0 D0050.00 1 D0050.01 2 D0050.02 3 D0050.03 1 4 D0050.05 1 6 D0050.05 1 6 D0050.06 1	

4 Select [+ D0051] as a sequential device address.

Node Name AGP	1	Device	Name PLC1		
Sheet Name Shee	et3	🗌 🗖 Seti	t as a global symbol	sheet.	
Symbol	Data Type	Consec utive	Device Address	No. of Data	Comment
Temperature1	16Bit(Signed)		D0050	1	
Temperature2	16Bit(Signed)		Consecutive		×
			Release + D0051 Cancel	0 D0050.00 1 D0050.01 2 D0050.03 3 D0050.03 4 D0050.04 5 D0050.05 1 6 D0050.06	

"+", indicating the device continuance, appears in the [Consecutive] field and the device address "D51" is displayed in gray.

						_ 🗆 🗵
ng	Help					
1	> Symbol >> 🦂	Feature ≫ 📑	- Sa	ave ン 🔖 Ti	ransfer	Monitor Status
L	Node Name AGP1		Device	Name PLC1		
	Sheet Name Sheet3		Set it as	a global symbol shee	et.	
L	Symbol	Data Type	Consec utive	Device Address	No. of Data	Comment

#### 31.2.3 Registering Bit Offset Symbols

When "Word type" is specified as a symbol data type, you may find a symbol of which word device is specified as a word-type symbol first, and the bit of the particular position among such word devices is specified with the offset number beginning with 0. This symbol is called "Bit offset symbol".

For instance, the device address "D50" in the figure below has the error information of Line A. (This device address is the "Parent device".) When the first bit has the "Speed Error" information and the 11th bit has the "Abnormal Temperature" information as further information, you can symbolize particular bits by specifying the bit offset.

- When you specify the bit offset, the symbol data type is "Bit" type.
   32-bit device (Integer\_Variables) can be accessed in bit unit. Add "single space + Xm" following the variable to allow you to access it in bit unit. Example) When accessing the 7th bit of Integer\_Variables Integer\_Variables .X6
  - When the data type of the parent device is BCD or String type, bit offset symbols cannot be used.

This section describes how to register bit offset symbols taking the above case as an example.

1 Specify "Line A\_Error Information" as a device address of "Parent Device".

3 Help Symbol >>	Feature ン [	<b>S</b> a	we <b>&gt;&gt; 🖄</b> Ti	ansfer	Monitor Status

#### 31.3 Sharing Symbols on the Entire Network

#### 31.3.1 What is a Global Symbol?

'Pro-Server EX' allows the same type of Device/PLC to share a symbol. This symbol is called a "Global symbol". Also, a symbol sheet consisting of such global symbols is called a "Global symbol sheet". You can commonly use a same global symbol sheet in all the registered Device/PLCs.

When you register the symbol sheet "Error Information" of "Manufacturer A\_Device/PLC 1" as a global symbol sheet, for instance, this "Error Information" symbol is also registered for multiple same Device/PLCs. Thus, even if many entry nodes are registered on the network, preparing one global symbol sheet saves you creating new symbol sheets as long as the contents are the same.

Global symbols should be registered per symbol sheet.

You can use global symbols commonly between different entry nodes, but the Device/PLCs should be of the same type.

### 31.3.2 Registering as a Global Symbol

This section describes how to register a global symbol.

- **1** Register a symbol on the symbol sheet.
- 2 Check [Set it as a global symbol sheet] on the right of the screen.

; Help					_ 🗆 X
≽ Symbol ≫ 葇	Feature ≫ [	Sa	ave ᠉ 🄖 Ti	ransfer	Monitor Status
Node Name AGP1		Device	Name PLC1		
Sheet Name Sheet3	T.	Set it as	a global symbol shee	at.	
Symbol	Data Type	Consec utive	Device Address	No. of Data	Comment

When the Device/PLCs are not of the same type, error may occur due to the difference of their device addresses. (Error will be displayed in red.)

In this case, please change device addresses after copying.

•

# 31.5 Checking Registered Symbols

When many symbols are registered in a symbol sheet, you might register the symbol names or device addresses mistakenly in duplication. In this case, 'Pro-Server EX' does not operate properly.

Thus 'Pro-Studio EX' has a function to check the registration duplication in advance. This function also displays/ outputs the results of duplication check in a CSV file.

This section describes how to check duplication of symbol names or device addresses.

- 1 Display the symbol sheet you wish to check.
- 2 Click the [Check Duplication/List Used Addresses] button.

Setting item		Setting content
	Group	Group registered symbols. Refer to "28.2 Grouping Symbols" for more details.
	Ungroup	Ungroup grouped symbols.
	Insert	Insert a row directly above a selected row on a symbol sheet.
O maked	Delete	Delete selected rows on a symbol sheet.
Symbol	Сору	Copy selected rows on a symbol sheet.
	Cut	Cut selected rows on a symbol sheet.
Paste		Paste to a symbol sheet the contents being copied or cut. When one row is selected, the copied or cut contents are inserted in the row directly above the specified row. When multiple rows are selected, the copied or cut contents are displaced with the selected cells deleted.
Symbol Sheet	Add	Add symbol sheets to the registered Device/PLCs. Clicking this button displays the "Add symbol sheet" dialog box. Specify [Node Name], [Device Name] and [Sheet Name].
	Delete	Delete a specified symbol sheet.
Check Duplication/List Used Addresses		Check duplication of symbol names and device addresses. Refer to "31.5 Checking Registered Symbols" for more details.
Global Constant Setting Screen		Displays the "Global Constant Setting" screen. Refer to "31.6.3 Global Constant Setting" for more details.

Setting item	Setting content			
Node Name	Displays the node name holding the symbol sheet currently displayed.			
Device Name	Displays the device name holding the symbol sheet currently displayed.			
Sheet Name	Displays the name of the symbol sheet currently displayed. You can change the sheet name.			
Set it as a global symbol sheet	Regard the symbol sheet currently displayed as a global symbol sheet. Refer to "31.3 Sharing Symbols on the Entire Network" for more details.			
Symbol	<ul> <li>Enter the symbol you wish to register.</li> <li>NOTE</li> <li>Must be entered at maximum 32 Unicode characters.</li> <li>Cannot begin with a number.</li> </ul>			
Data Type	<ul> <li>Select the type of the symbol to be registered.</li> <li>Clicking the [Data Type] field displays a data type list.</li> <li>The following data types are available.</li> <li>Bit</li> <li>16 bits (Signed decimal, unsigned decimal, hexadecimal, BCD)</li> <li>32 bits (Signed decimal, unsigned decimal, hexadecimal, BCD)</li> <li>Single-precision floating point</li> <li>Double-precision floating point</li> <li>Character string</li> </ul>			
Consecutive	<ul> <li>Displays a continuous attribute panel if symbols have been already set. Select a sequential device address or offset of bit type. When a sequential device address is selected, "+" appears indicating the device continuance; when the offset is selected, offset value appears.</li> <li>Sequential specification         <ul> <li>Symbol Data Type Consec Device Address No. of Data Type Temperature1 16Bit(Signed)</li> <li>D0050 1</li> <li>Temperature2 16Bit(Signed) + D0051 1</li> </ul> </li> </ul>			
	Offset specification     Symbol Data Type Consec Device Address No. of Data     LineA_Error 16Bit(Signed) D0050 1     SpeedError Bit 01 D0050.01 1     1			
Device Address	Specify the start address of the device to be specified as a symbol. When [Consecutive] is selected, the address is automatically displayed.			
No. of Data	Specify the number of devices to be specified as symbols. (The default value is "1".) You can enter the preset global constant by clicking the list button. Refer to "31.6.3 Global Constant Setting" about global constants. NOTE • You can set the number of data up to 1020.			
Comment	You can enter necessary information like the meanings of symbols as comments, if any.			

## 31.6.2 "Edit Symbol" Screen

Setting item	Setting content
Symbol Name	<ul> <li>Enter the symbol name you wish to register.</li> <li>NOTE</li> <li>Must be entered at maximum 32 Unicode characters.</li> <li>Cannot begin with a number.</li> </ul>
Symbolize Address	Input a symbol name automatically from the device address and data type. A symbol name is to be input as follows: Ex.) In the case of the device address "D50" and the data type "Word": _D50_WORD
Address	Enter the (start) device address.
Data Type	<ul> <li>Select the data type of device: [Bit], [16 bits], [32 bits], [Single-Precision Floating Point],</li> <li>[Double-Precision Floating Point], and [String].</li> <li>If [16 bits] or [32 bits] is selected, specify the attribute: [Signed Decimal], [Unsigned Decimal], [Hexadecimal], [BCD].</li> </ul>
Consecutive	Check this if the device addresses are sequential.
Offset	Select an offset value by clicking the list button. 16 bits: from 0 to 15 32 bits: from 0 to 31
No.	Specify the number of devices to be specified as symbols. (The default value is "1".) You can enter the preset global constant by clicking the list button. Refer to "31.6.3 Global Constant Setting" about global constants. <b>NOTE</b> • You can set the number up to 1020.
<	Displays the symbol setting of the upper row.
>	Displays the symbol setting of the lower row.

Setting item	Setting content
Continuous Insertion	<ul> <li>Set the sequential device address or offset address-added symbol in the next row of the symbol sheet with the current set contents.</li> <li>NOTE</li> <li>When the symbol name is specified in [Symbolization of Address], the values following the device address and data type are automatically changed.</li> <li>"+" appears in the [Consecutive] field on the symbol sheet.</li> </ul>

### 31.6.3 Global Constant Setting

By registering the data number of symbols as a "Global constant", you can change all the data numbers at once by changing the constant when such a change has been made to the system as changing a symbol data number.

To set a global constant, click the [Global Constant Setting Screem] button on the symbol registration screen.

Global Constant Setting				×	
Сору		1:			
Cut	Global Constant	Global Constant List			
Paste	Constant Name	Value	Comment		
Insert	_				
Delete					
The constants defined in this list can be used as the No. of data or arrays in a symbol sheet.			OK	Cancel	

Setting item	Setting content
Constant Name	Enter the name of the constant to be set.
Value	Enter a constant. NOTE • The valid values range from 1 to 4096.
Comment	You can enter necessary information like the meanings of constants as comments, if any.
Сору	Copy the global constant in a selected row.
Cut	Cut the global constant in a selected row.
Paste	Insert a copied or cut global constant to the row directly above a selected one.
Insert	Insert a row directly above a selected row on a symbol sheet.
Delete	Delete a selected row.

## 31.7 Restrictions

#### Symbol whose data type is undefined

When you import a screen project file of 'GP-Pro EX' or 'GP-PRO/PBIII for Windows', the word symbols in the project file are to be imported as an undefined data type of symbol.

#### • Use with 'Pro-Studio EX'

To use an undefined data type of symbol with 'Pro-Studio EX', you are requested to input the data type. (When you use a defined symbol, data type entry is not available.)

#### • Use with Pro-Server API

There are 2 types of Pro-Server API: API requiring separate specification of data type and that requiring no specification.

API type	Description
With separate specification	This API prioritizes the data type separately specified over the symbol data type.
Without specification	When the specified symbol is a 16-bit device, the symbol becomes 16-bit signed; when the specified symbol is a 32-bit device, it becomes 32-bit signed.

#### Maximum number of data

The following table shows the maximum number of data settable according to the symbol type.

Symbol type	No. of data
Bit symbol	255
Bit offset symbol	1
16-bit signed symbol	1020
16-bit unsigned symbol	1020
16-bit BCD symbol	1020
16-bit HEX symbol	1020
32-bit signed symbol	510
32-bit unsigned symbol	510
32-bit BCD symbol	510
32-bit HEX symbol	510

Character string symbol	255
(Data type is "Undefined".)	1

### Symbol whose data number is undefined

The data number of the following symbols is regarded as "Undefined".

- Symbols created by importing a screen project file of 'GP-Pro EX' or 'GP-PRO/PBIII for Windows'.
- Symbols created by converting a network project file made by the old version of 'Pro-Server'.
- Symbols whose data number has not been specified in the symbol setting.
- Use with 'Pro-Studio EX'

To use an undefined data type of symbol with 'Pro-Studio EX', you are requested to input the data type. (When you use a defined symbol, data type entry is not available.)

• Use with Pro-Server EX API

Such symbols are regarded as a symbol of which data number is "1".

#### About the system variables of "GP-Pro EX"

The device quantity of one system variable of 'GP-Pro EX' basically as 1 is handled even with 'Pro-Server EX', but "#L\_IOInfo" and "#L\_IOStatus" is handled as 4.
